

Can India's cloud run on *India's* *sunshine?*

300 GW⁺ of clean capacity, led by solar.

300.5 GW

non-fossil · over **54%**
of installed capacity

Source: MNRE, installed non-fossil capacity as of 31 July 2026.

— THE HOPEFUL PART

And it's growing at
record speed.

55.3 GW

of new clean capacity added in a single year (FY 2025–26), a national record.

44.6 GW

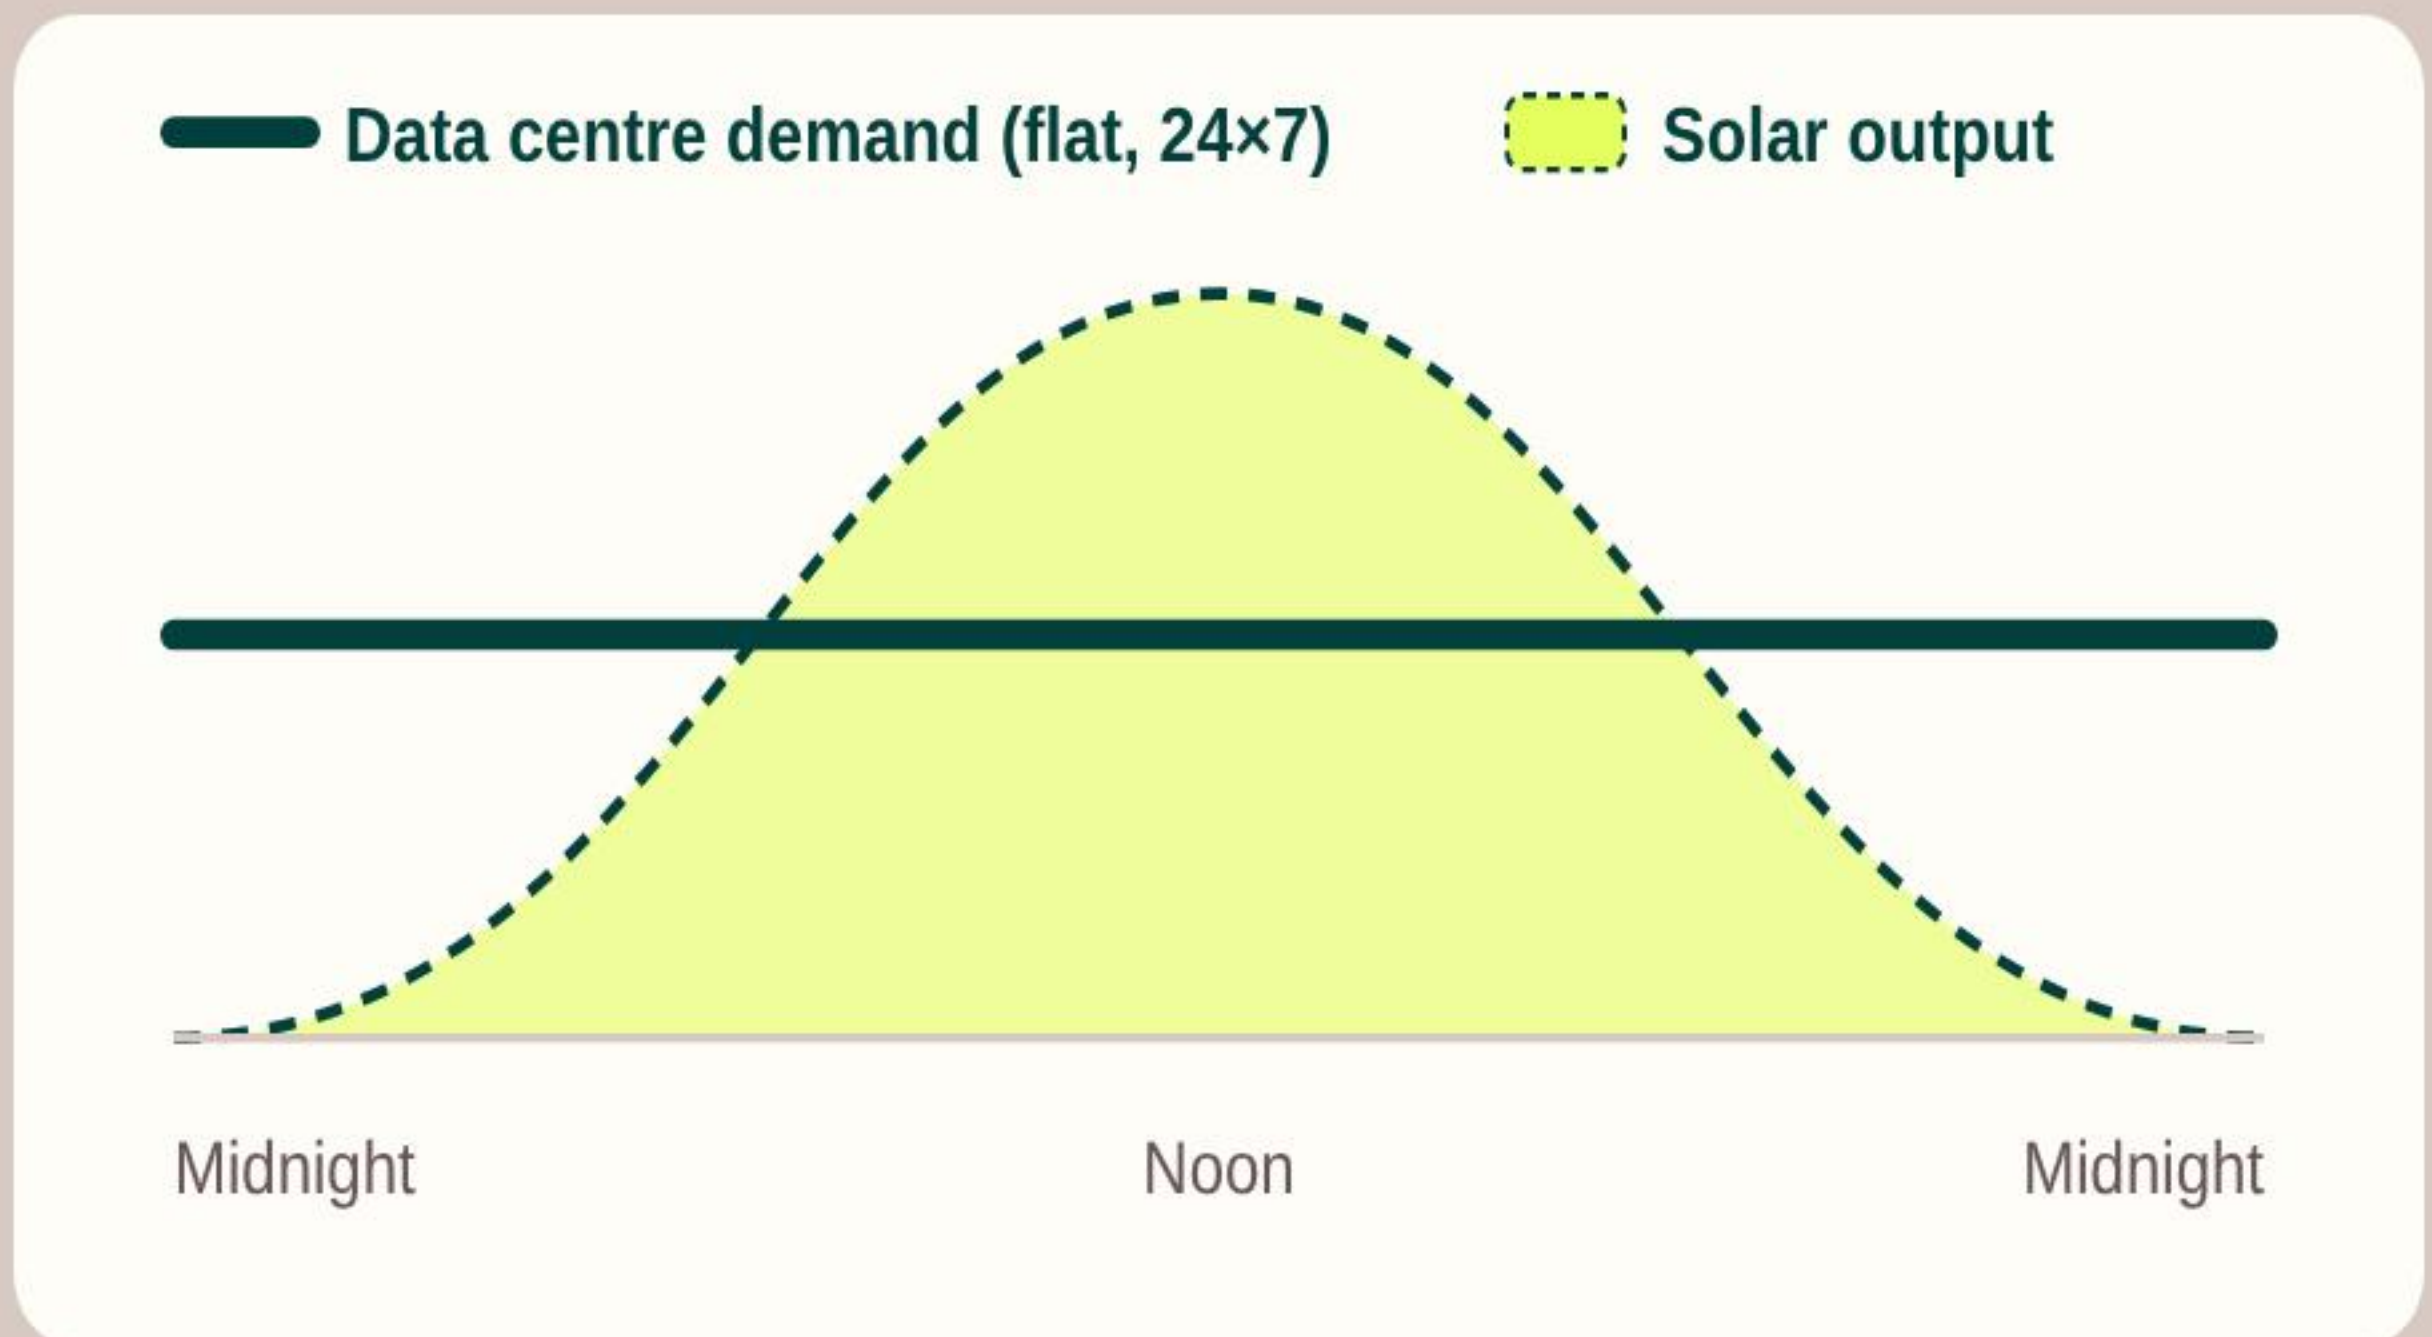

of it was solar

60%+

of the 500 GW 2030 goal
already reached

Source: MNRE (FY 2025–26 additions; progress to 31 July 2026).

Data centres never sleep. *The sun does.*

Solar alone can't power a 24×7 load. The answer is a **mix**: solar, plus **wind**, which often blows into the evening, plus **battery storage**.

— THE RULES OPENED THE DOOR

Buying green power *got much easier.*

India's Green Energy Open Access Rules, 2022 let large consumers buy renewable power directly.

100 kW Minimum load to qualify, **down from 1 MW**

15 days To approve an application, or it is **deemed approved**

Banking Surplus green energy can be **banked** with the local utility

Source: Ministry of Power, Electricity (Promoting Renewable Energy Through Green Energy Open Access) Rules, 2022. State regulations vary.

Four routes to *clean power.*

Green power deals

Long-term contracts with solar and wind farms via open access

Own the plant

Captive or group-captive solar and wind parks

On-site solar

Rooftop and carport panels cover a small but visible share

Green tariffs

Buying renewable supply from the local utility, where offered

The gold standard: *clean power every hour.*

Buying enough renewable energy over a year isn't the same as running on clean power around the clock.

GOOD

Annual matching

Total clean energy bought equals total use over the year

BEST

24×7 matching

Clean energy covers demand in every single hour

Why it matters: coal still generates most of India's electricity, especially at night. Hourly matching drives investment in wind and storage.

Three questions for *your cloud provider.*

01 What share of your power is renewable, in India?

02 Is it matched annually or hour by hour?

03 Which route: contracts, own plants or utility tariffs?

— THE TAKEAWAY

India has the sun,
the wind and the rules.
*Now the cloud needs
to plug in.*
